

Welcome to Connected Dealer Services! Our devices use the latest GPS technology. Paired with our powerful new Dealer Inventory Management solution, CDS equips you with the most competitive tools in the market.

Kit Includes Arrow-G Tracker and In-Line OBD-II Cable

- 1 Remove in-vehicle OBD-II port bracket.
- 2 Plug in-line cable into vehicle port.
- 3 Connect Arrow-G. Wait for both LEDs to lock solid
■ Green = Network and ■ Red = GPS

This device is equipped with impact/motion sense technology. It's imperative that the device be secured to a rigid structure during installation. Optimal mounting surfaces within the vehicle could be metal or solid plastic dash support structures. It is not necessary that the device be mounted in any particular direction as long as it is flat and secure with the label facing down. The device will calibrate its direction once the vehicle is in motion. Failure to securely mount the device could cause false readings from the on board sensors of the device.

ALL WORK SHOULD BE PERFORMED BY A PROFESSIONAL INSTALLER.
